A communication was received, entitled, "On Pyrophyllite" from Schuylkill Co., Pa., by Dr. F. A. Genth (p. 279).

Mr. Lesley described a recently discovered ancient buried river channel crossing the Allegheny river twice, from the mouth of the Clarion, above and below Parker, at the northern limit of Armstrong County.

As Mr. Carll has shown that the preglacial Allegheny river had its heads in the high ridge south of Tidioute, in Venango County, it is evident that the Clarion river was then the main Allegheny river; which explains the ancient double curve at Parker. After the ice had retreated from the northern country, leaving all the valleys choked with drift, the combined waters which until then had entered the basin of Lake Erie, at Dunkirk, in New York State, broke away through the ridge below Tidioute, and cut the present straight channel at Parker, across and 100 feet lower than the ancient channel.
